

HOTELS SERVICES

LOOKING FOR WAYS TO FIGHT COVID-19?

REDUCE HEALTH HAZARDS: Tarifold Antimicrobial Display Units are specifically designed for working environments that are subject to strict hygiene standards where multiple users (customers, employees or guests) need access to the documents.

ANTIMICROBIAL: Tarifold Antimicrobial Display Pockets are manufactured with silver ions, a proven antimicrobial agent, that is EPA registered and FDA recognized; Sterifold display pockets release antimicrobial silver ions which provide effective and long-lasting protection against microbial proliferation.

DISPLAY POCKETS*: One-piece wire reinforced display pockets hold letter-size paper: Frames keep pockets rigid while still flexible enough to insert and remove documents easily. For optimal anti-microbial protection, it is recommended the display panels be replaced every 2 years.

Item	Description	Price	UOM
